Portfolio

München, Germany

SUMMARY

I am Youssef, an AI student at Technische Hochschule Deggendorf, passionate about building intelligent solutions that make a real-world impact. With experience in natural language processing NLP, machine learning, computer vision and GenAI, I specialize in developing computer vision programs, AI powered chatbots and automation tools.

EDUCATION

Bachelor of Science in Artificial Intelligence

Deggendorf Institute of Technology

10/2023 - 02/2027

Deggendorf, Germany

EXPERIENCE

Full-Stack Developer

The Calligraphy Cut Company

05/2025 - 07/2025

Oelde, Nordrhein-Westfalen

- <https://frontend-calligraphy-cut-chatbot.kindpebble-7abcd71b.germanywestcentral.azurecontainerapps.io/>
- Developed a responsive web application using React/Vite frontend with TailwindCSS and Python/FastAPI backend for a haircut styling business
- Integrated AI-powered chatbot functionality by leveraging GROQ API and implemented secure authentication with Firebase including email and Google OAuth
- Containerized the application using Docker and Docker Compose, ensuring consistent development and production environments
- Deployed the solution to Azure Cloud using Container Registry and Container Apps services, configuring proper networking and security settings
- Established automated CI/CD pipeline with GitHub Actions for continuous building and deployment of Docker images to Azure upon code changes

Full-stack and AI Engineer

Saspa Furniture

06/2024 - 08/2024

Kuwait City, Kuwait

- <https://saspa-webpage.vercel.app/>
- Assisted in designing and developing the company website and a responsive landing page.
- Implemented front-end features using HTML, Tailwind CSS, and TypeScript, and integrated back-end services with Node.js/Express and database connectivity.
- Used convolutional neural networks to build a computer vision model that can classify room shapes and sizes and the appropriate furniture type to fit them.
- Developed and integrated high-quality WebGL shaders for product visualizations.
- Pioneered the use of Unity for interactive 3D product demos.
- Collaborated closely with the design team to optimize usability and performance.

PROJECTS

Titanic Prediction App

<https://github.com/blanconaldo/Titanic-Prediction-App>

- Architected a full-stack ML application using Git submodules with React/Vite frontend and Python/FastAPI backend to predict Titanic survival probabilities
- Implemented several machine learning algorithms trained on historical Titanic passenger data, with an intuitive user interface for data input and prediction visualization
- Developed secure user authentication system with SQLite database integration, ensuring proper data management and access control
- Created comprehensive testing strategy with pytest for backend, component tests for frontend, and end-to-end tests using Playwright and Genshin
- Containerized the multi-service application using Docker Compose and established GitLab CI/CD pipelines for automated testing and deployment while following Agile/Scrum methodologies

Fashion MNIST Classifier

<https://fashion-mnist-classifier.onrender.com/>

- Built a convolutional neural network classifier trained on Zalando's Fashion MNIST dataset, achieving up to 93% accuracy.
- Dockerized and deployed the model as an interactive Streamlit app on Render for accessible, real-time predictions

Canadian Port Entry Prediction Model

<https://github.com/blanconaldo/Canadian-Port-Entry-Prediction-Model>

- Developed a Streamlit application that predicts entry into Canadian ports from various regions and transport modes using regression algorithms.
- Designed an intuitive user interface for real-time predictions and data exploration across multiple transportation scenarios.

SKILLS

HTML

JavaScript

React

Next.js

Node.js

Express

MongoDB

Firebase

Git

Python

TypeScript

Tailwind CSS

CORS

FastAPI

RESTful API

Artificial Intelligence

Machine Learning

Deep Learning

Neural Networks

CNN

Ai Agents

n8n

Vite

RAG

LangChain

Docker

Kubernetes

GitHub/Gitlab

GitHub Actions

CI/CD

DevOps

Tensorflow

Pytorch

Vercel

Render

Heroku

AWS

Microsoft Azure

Continuous Deployment

Postgres

SQLite

Computer Vision

JIRA
